Standpoint

Video conferencing for legal proceedings and secure communications

Standpoint is a purpose-built video conferencing system designed specifically for sensitive court proceedings like those involving child victims. Our role-based architecture allows children to testify from safe locations while maintaining the legal requirements of court proceedings. Everything runs on your local network with zero internet exposure.

Privacy & Security First
No cloud storage, no third-party servers, no internet exposure. All data stays within your local network with complete court control.

Trama-Informed Design
Role-based system protects vulnerable witnesses from intimidation. Witnesses can testify from safe locations.

Cost Effective
One-time hardware purchase with no recurring subscription fees. No bandwidth costs, no service contracts, no per-user licensing.

Simple Deployment
Deploy in minutes using standard iPads and Apple TVs. No servers, no complex IT infrastructure, no specialized networking required.

Court-Specific Features
Pause/unpause controls, AirPlay support for courtroom displays, dual-stream viewing for court management, automatic reconnection

Mobile & Portable
Transport the entire system between courthouses as needed. No fixed infrastructure required, eliminating expensive permanent installations at every location

Platform: iOS 26.0+ (iPad, iPhone, Apple TV)

Technology: End-to-end encrypted peer streaming

Hardware: iPads, iPhones, and Apple TVs

Network: Local WiFi only, no internet required

Security: NIST SP 800-53 Compliant

Setup: Turn-key system, just turn it on and go
